

Typical project for new-build PHCs

- Country of ~40M people
- Low-income country (GNI = \$950USD)
- 2000 existing basic PHCs
- Only 1% (20 PHCs) are epidemic/climate-ready
- PHC is becoming a national priority

Success criteria

- 80% of PHCs have climate and epidemic-ready infrastructure
- Essential services have high uptime and maintained during crises (power, internet, water, etc)
- Fully-staffed
- Staff are trained for epidemic response
- Well-stocked with essential medicines and PPE
- Have min. lab equipment
- Health center is safe for staff and patients
- Effective data reporting system in place
- Regularly maintained

		Build momentum	Project planning & budgeting		Commitment	Architectural planning	Build pilot facilities	Measure/improve design	Build at scale	Maintain/sustainability
		Convening partners, writing case studies, make political case, establishing a governance structure for the project.	Establishing a real project in-country with the aim to pilot and scale PHC infrastructure improvements.		Final commitment established by key stakeholders.	Create implementable plans for upgrading and building PHC	Build first 5-10 facilities with the goal of doing M&E and suggesting improvements to the designs.	M&E of the pilot facilities to understand how to build at scale successfully.	The goal is to upgrade and build many PHC facilities in the country.	Facilities still need to be excellent 5/10/15 years later. Sustainability needs to be core to the planning/budgeting and people can't lose focus.
Funders	Ministry of Finance		Budgeting		Commit long term budget		Builder selection process			
	Large funders				Commit funding	Funded				
	Focused funders (e.g. HIV, ANC, Solar panels)									
Government	National and regional leaders	Assign a leader to PHC project	Create steering committee	Draft policy		Steering committee		Progress reports		
	Legislative				Pass policy changes					
	FMOH	Identify champions	Healthcare system landscape and planning			Assist localized building plans	Steering committeeBuilder selection	Quality improvement	Planning	
	Regional MOH					Assist localized building plans			Select sites for building	Manage contracts
Building & design	Architects/engineers (External and FMOH)	Create general blueprints	Assess local context	Set standards		Create localized building plans	Project managagement	Adapt and improve based on learnings		Upgrade designs
	Local architects								Design based on pilot facilities	Upgrade designs
	Local builders						Build + Upskilled with experts		Build	MaintainRenovate
	Outside technical experts (e.g. Health, technology, equipment)	Create general blueprints Advocacy	Healthcare system landscape and planning BudgetingClimateEpidemics			Assist localized building plans		Assist with quality improvement		
Health facilities	Healthcare staff		Consult on designs/standards			Assist localized building plans		Data collectionFeedback
